Reflex paint

Schjernerling Reflex is an exciting paint that reflects light in the dark. The paint is grey in ordinary daylight.

Reflex (2169) can be used on almost any paintable surface, e.g. wood, painted surfaces and stone. It is waterproof once it has dried for about 30 minutes and does not need fixing.

Use Textil Reflex (6173) directly on the fabric; apply 2-3 coats to achieve the best effect. Leave the paint to dry for about 30 minutes, and then fix it using an iron (remember to use greaseproof paper) for five minutes at cotton temperature. The fabric can then be washed at 30 degrees (remember to turn it inside out).

Reflex is made in Denmark and available in 50 ml pots.
